

Control ID	Control (or Control Enhancement) Name	Control Text	Discussion	Related Controls	Data Collection	Evidence Detail	Findings	Disposition	Threat(s)	Vulnerability Description	Mitigating Factor or Compensatory Controls in place	Observed	Impact	Overall Risk	Comments	
MP-1	Policy and Procedures <i>assess documentation (policies, procedures, plans, SOPs in advance) to ensure to be better organized</i> "Do any specific what you're asking for, for example, "Show me your last 3 financial documents of information with time stamps on them." "What other entities to see the company hasn't only done 2 times. Their policies and procedures are seen as consistent and repeatable media can be to tell about requesting the documentation is to take this of their time (it's a why for them not a burden) media of the documentation DO THOUGH WHEN YOU DOCUMENT THINGS, IT NEEDS TO STAND ON ITS OWN JUDGERS MAY REVIEW THIS, ... IF THERE WAS AN INCIDENT, AND IF COMES YOU LIGHT YOU WANTED THEM THE PERSONS THAT CONTROLS WERE NOT IN PLACE AND YOU DID NOTHING ABOUT IT, THIS CAN BECOME A COURT DOCUMENT."	1. Develop, document, and disseminate to [Assignment: organization-defined personnel or roles] a [Assignment: organization-defined] media protection policy that: a. Addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and b. Is consistent with applicable laws, executive orders, directives, regulations, policies, standards, and guidelines; and c. Procedures to facilitate the implementation of the media protection policy and the associated media protection controls; 2. Designate an [Assignment: organization-defined official] to manage the development, documentation, and dissemination of the media protection policy and procedures; and 3. Review and update the current media protection: 1. Policy [Assignment: organization-defined frequency] and following [Assignment: organization-defined event]; and 2. Procedures [Assignment: organization-defined frequency] and following [Assignment: organization-defined event].	Media protection policy and procedures address the controls in the MP family that are implemented in: MP-1, PS-6, SI-12.	AC-10, AU-1, CP-2, CP-9, CP-10, MA-1, MP-4, MP-6, PL-2, PS-4, SC-12, SC-13, SC-14, SI-12	Interview	Network Engineer, Terry Jones Director of IT, Bob Smith	No media protection policies or procedures were available	Not in Place	Unauthorized access	No documented processes or policies	Tribal knowledge in place refers to expertise, experience-based knowledge that is passed within teams but not formally documented		5	5	25	Staff do not know what expectations or standards are and no process around media protection storage, sanitization is documented it may not be done properly. Without standards and policy no process can be regulated consistently and staff will develop their own individual processes.
MP-2	Media Access	Restrict access to [Assignment: organization-defined types of digital and/or non-digital media] to [Assignment: organization-defined personnel or roles].	System media includes digital and non-digital media. Digital media includes flash drives, diskettes, image	AC-10, AU-1, CP-2, CP-9, CP-10, MA-1, MP-4, MP-6, PL-2, PS-4, SC-12, SC-13, SC-14, SI-12	Tested (Interviews are another option which happen often)	Network Engineer, Terry Jones Director of IT, Bob Smith	USB Drives are not automated through access controls and database access is logged. SLP solution "none" is implemented and handling data well.	In Place Example: This is more of a tested paper than employee has to determine if systems work and create a test account. Make an account to look like a sales rep. "test", and then try to log into the database to validate the controls are working. Also is more objective analysis.							0	CONTROL IN PLACE
MP-3	Media Marking <i>Classification is usually level of data.</i>	1. Mark system media indicating the distribution limitations, handling caveats, and applicable security markings of any of the information; and 2. Label [Assignment: organization-defined types of system media] from marking if the media remain within [Assignment: organization-defined controlled areas].	Security marking refers to the application or use of human-readable security attributes. Digital media is	AC-16, CP-6, MP-5, SI-22, SI-12.	Interview	Network Engineer, Terry Jones Director of IT, Bob Smith	Review documentation of identified media for marking (could data, financial, could data handling, financial data did not having marking consistently.	Partially in Place	Data Loss/Information Disclosure	Without media marking, financial data could be disseminated to unauthorized parties. Financial data could accidentally be disseminated to unauthorized parties.	None		2	8	16	Financial data isn't disclosed often by accident, but when it is, it's a negative impact on moral and investor confidence.
MP-4	Media Storage	1. Physically control and securely store [Assignment: organization-defined types of digital and/or non-digital media] within [Assignment: organization-defined controlled areas]; and 2. Protect system media types defined in MP-1a until the media are destroyed or sanitized using approved equipment, techniques, and procedures.	System media includes digital and non-digital media. Digital media includes flash drives, diskettes, image	AC-10, CP-2, CP-9, CP-10, MP-2, MP-7, PS-4, SC-12, SC-13, SC-14, SI-12	Interview	Network Engineer, Terry Jones Director of IT, Bob Smith	No control or governance around thumb drive usage and storage	Not in Place	Data Loss/Information Disclosure	Media could be brought into the environment and media threat could exist.	USB Drive automatically disabled		5	5	25	Loss of IP and introduction of malware USB could introduce malware threats.
MP-5	Media Transport	1. Protect and control [Assignment: organization-defined types of system media] during transport outside of controlled areas using [Assignment: organization-defined controls]; 2. Maintain accountability for system media during transport outside of controlled areas; 3. Document activities associated with the transport of system media; and 4. Restrict the activities associated with the transport of system media to authorized personnel.	System media includes digital and non-digital media. Digital media includes flash drives, diskettes, image	AC-7, AC-10, CP-2, CP-9, MP-4, PS-6, PS-12, SC-12, SC-13, SC-14, SI-12	Interview	Network Engineer, Terry Jones Director of IT, Bob Smith	We don't allow people to travel sensitive data on a third Drive. We use cloud storage and have people access from the cloud when they're off destination. Any system out for maintenance or repair has sensitive data wiped before sending.	In Place							0	CONTROL IN PLACE
MP-6	Media Sanitization	1. Sanitize [Assignment: organization-defined system media] prior to disposal, release out of organizational control, or release for reuse using [Assignment: organization-defined sanitization techniques and procedures]; and 2. Apply sanitization mechanisms with the strength and integrity commensurate with the security category or classification of the information.	Media sanitization applies to all digital and non-digital system media subject to disposal or reuse, when:	AC-3, AC-7, AU-11, MA-2, SA-3, SA-4, SA-5, PM-22, SI-12, SI-16, SI-17, SI-18, SI-19	Tested	Network Engineer, Terry Jones Director of IT, Bob Smith	Reviewed audit records of HDD destroyed 1 instant, but the other 2 were 3 years old. Sanitization is happening but inconsistently documented	Partially in Place	Data Loss/Information Disclosure	Without record keeping there is no assurance of proper sanitization. New people could take over process and result in it not being done.	Tribal knowledge process and control of team with one person that stated he consistently does it.		2	9	18	There is no assurance of proper sanitization. Tribal knowledge process. A new person may not know, and if theft occurred there would be no assurance of controlled data.
MP-7	Media Restrictions	Don't take organization if you don't think it's a great control, or implementation of the control has need to be objective. There's no requirement in their SOP that they do more.	System media includes both digital and non-digital media. Digital media includes diskettes, magnetic tape	AC-10, AC-20, PL-4, PM-12, SC-34, SC-41.	Tested	Network Engineer, Terry Jones Director of IT, Bob Smith	USB automounting is the only control in place. No documented policy or procedures.	In Place							0	CONTROL IN PLACE
MP-8	Media Degaussing <i>Top Secret marked down to Secret marked down to Unclassified or Internal Use Only but if the sensitive material is restricted it can be used for public consumption</i>	Media degaussing applies to digital and non-digital media subject to release outside of the organization, whether the media is considered removable or not. When applied to system media, the degaussing process removes information from the media, typically by reformatting categories or classification level, such that the information cannot be retrieved or reconstructed. Degaussing of media includes: reducing information to enable secure release and distribution. Degaussing ensures that empty space on the media is devoid of information.	Media degaussing applies to digital and non-digital media subject to release outside of the organization, whether the media is considered removable or not. When applied to system media, the degaussing process removes information from the media, typically by reformatting categories or classification level, such that the information cannot be retrieved or reconstructed. Degaussing of media includes: reducing information to enable secure release and distribution. Degaussing ensures that empty space on the media is devoid of information.	None	Interview	Network Engineer, Terry Jones Director of IT, Bob Smith	There is no process or requirement for media degaussing.	N/A							0	N/A
